How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I save electricity by teaching my children to cut off all electronics when not in use. We also use lower wattage bulbs. We hang most of our clothes instead of drying them in dryer. Our heating system causes the air to be very dry so we use the heat to knock the chill out of the house and we dress warm. We also keep the doors closed to all the rooms and cut off the heat in the rooms we rarely use. We save water by cutting the water off wl brushing our teeth. We take limited baths and timed showers.

How can the Mannheim Garrison improve its recycling program?

If Mannheim Garrison would work with the schools and other organizations to start a recyclying program, I think this would make a great difference. Maybe a competition grade levels in the school. The students would take this experience back into their h and recycling would become part of their normal activities.

For more information about USAG Mannheim environmental programs visit our Sort Center, see us at #346 Taylor Bks; or look us up on the internet http://home.mannheim.army.mil/sites/directorates/DPW_web/Environmental.htm, or dial DSN 381- 8675 / commercial: 0621 – 730 8675.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences. The way that I conserve energy is I don't watch that much TV I just go outside and hang with my friends. I didn't play video games because I think there really boring. I only go on the computer for school work or if I really what to look something up. Y family also makes sure that if we don't need the lights then we leave them off and sometimes on rare moments we light candles in the living room and kitchen. And conserving heat is very easy because I can't stand to be hot so I never have the heater on and if I do get cold I open or close my windows. Water I can't say I conserve it because I brink a lot of it, but as far not wasting it I think I do a good job at it. If I am not getting something to drink or showering I don't think it is ever running. When taking a shower I am in and out in like 10 minutes.

How can the Mannheim Garrison improve its recycling program?
Improving the recycling program would be a hard task to it done because you can't make people recycle, so what I would suggest for you to get some people that are really in to the whole recycling thing and ask them to go and pick up trash that can be recycled, and have them go to the bumps and look for things that can and should be recycled but people just throw away.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

We could save electricity by shutting off lights at school when it is sunny out side we don't need lights if it is bright out. We could also save water by reusing the carwash water on cars instead using freshwater everytime. We could reduce heat by shutting down radiators during the summer. That

---

How can the Mannheim Garrison improve its recycling program?

I think tthat enforcing paper recycling in the schools would double the output of recycled goods and limit a lot of the school trash.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

_ My family turns off all lights when not in use.

_ We only use the dishwasher and washing machine when it's full. We try to wear at jeans more than once, if it's too dirty then, wash them.

- All of us takes short showers and take a bath once a week. Also we don't let the water run when we're brushing our teeth or are shaving

_ We save money in our heating bill by setting the thermostat and also turn off all hea the day when no one is home.

How can the Mannheim Garrison improve its recycling program?

-Encourage people to bring their own bags at the commissary and the PX just like th Europeans do.

-Make people pay for bags to encourage them to bring their own. Have recycling ma where people can drop off their bottles or plastic bottles for deposits.

-Place designated recycling containers in every public place and place a fine on people who don't follow the rules.

-Mostly, people need to be penalized for not recycling in order to force them to do it.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.
My husband and I save electricity by using alternative light sources: sunlight, Romantic candle light. While the house is warmed from the sun, we turn our heaters During the hours that we are home, we only heat the rooms that we most frequently use. living room, bedroom, and bathroom. The heat from the kitchen stove is sufficient for while we use the kitchen to cook! We conserve water, by keeping a wash basin in our sink soapy water to wash dishes.When showering we turn the water onto get our bodies w off to soap up, then on to rinse, and we are done. Long showers with the water runni use up oil, and create moister that can cause mold!

How can the Mannheim Garrison improve its recycling program?
I noticed that recycling is enforced in housing, but while at work. I see Most places of duty do not separate there trash; gleber sacks, might make Throwing our trash away a little more complicated, but we all do it at home Already, why not while we are at work!!

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

Recommend that the windows in Office Building bathrooms be secured during heating months. Opening bathroom windows in the winter to "Air Out" is a great energy waster. We cannot afford to heat the outside.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I turn off all the stand by buttons on my stereo equipment and my TV's to save electricity. When I leave the room I turn off the lights.

I use the water that collects in my dryer to water the plants or to put it in my steam iron.

How can the Mannheim Garrison improve its recycling program?

I think the people at the sort center are very nice and helpful, the only thing I would suggest it that not all their employees take their lunch break at the same time, then the sort center could stay open during lunch so people can bring their recycles during lunch hours because sometimes that's the only time to make it there. Thanks

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences: I save electricity by switching off extra lights, that are not really needed and by unplugging stand-by switches.
I save heat by setting the system to a lower temperature when no-one is In the building.
I save a considerable amount of water by using bath water for cleaning floors, flushing toilets and watering the garden. I also save water by not turning the tap on full when washing face, brushing teeth. The same applies to showers. One gets just as clean if the shower is not turned on to the maximum.

How can the Mannheim Garrison improve its recycling program?

By religiously separating waste into categories; paper, glass, plastic and metal.

For more information about USAG Mannheim environmental programs visit our Sort Center, see us at #346 Taylor Bks; or look us up on the internet http://home.mannheim.army.mil/sites/directorates/DPW_web/Environmental.htm, or dial DSN 381- 8675 / commercial: 0621 – 730 8675.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

We switched to energy-efficient compact fluorescent lamps. We don't keep on excess lights.
I keep heating and cooling to a minimum. I also keep heating vents unobstructed.
I shut my computers off at night and only use my copier and fax machine as necessary.

How can the Mannheim Garrison improve its recycling program?

I think that something should be done about the trash program – recycling should be Improved (even – mandated). The yellow bags (given on the local economy) should be made available on post.

Water can be checked at the car wash stations.

More recyclable materials can be used. Maybe a drive can be done for the paper bags.
Offices should mandate recycling.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

My family and I conserve energy by doing laundry very late at night; usually right before bed. We also turn our water heater off at night for a few hours. This is An easy one because it is on an automatic timer.

How can the Mannheim Garrison improve its recycling program?

I know personally in my office there are few recycling containers. I know they Are available on installations, but not in every building. Putting recycle containers In every building would allow one person to make a difference.

Phone: 0177-744-4010 Email: james.neitzel@hq.21tsc.army.mil

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I save water & electricity by washing only full loads of laundry on the lowest temperature cycle setting to get the selected fabrics clean. I save heat by turning the thermostat down when airing out or venting my house during daylight hours. I also start my fireplace during winter months while venting before turning the thermostat back up, it also helps keep the chill out while venting.

How can the Mannheim Garrison improve its recycling program?

Mannheim can improve its recycling program by establishing an initiative promoting good recycling practices. For example: Have customers take their separated recycling material to the Sort Center on Taylor Barracks. For every yellow recycling bag full of separated items or recyclable items too large to fit in a bag, the customer receives a coupon worth 10 points from the Sort Center. Once they obtain a predetermined number of points, say 100 points, the customer receives a coupon from the community for a free movie at the Schuh Theater or other items.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

In our home my husband teach our children how to conserve and recycle by modeling behavior. We do "not waste" anything. We take showers instead of baths, we do our laundry at the laundry mat, I wash dishes manually, never leave the water running while brushing our teeth or shaving, turn off lights, tv, computer etc. when not in use. We maintain heat at a comfortable setting and lower it when we're on leave.

We recycle everything that can be recycled this is the norm in our home and our child don't know any different. I strongly feel if we educate our children early on, our world become a better place for future generations to enjoy. Teaching beings at home!

How can the Mannheim Garrison improve its recycling program?

I think the Mannheim Garrison has a very good recycling program at hand. I can't think of ways to improve it at the moment. Encouraging youth to participate in the recycling program and educating them on the consequences If we don't may be a start, after all it will be their future that will be effected.

For more information about USAG Mannheim environmental programs visit our Sort Center, see us at #346 Taylor Bks; or look us up on the internet http://home.mannheim.army.mil/sites/directorates/DPW_web/Environmental.htm, or dial DSN 381- 8675 / commercial: 0621 – 730 8675.

Phone: 384-6238

Email: michael.rudd@eur.army.mil

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences. At home I use only lights or electric outlets that are needed at the time and unplug when not being used. I notify my landlord of any leaking pipes. I close windows e heaters are on in order to keep from heating outside. At work I turn off all lights in all s and halls that still allow safe working area during daylight hours. The sun provides natural light enough to light office space. Use battery operated devices when possible. Ensure all un-needed devices are unplugged. Notify DPW of any leaking water faucet's. Keep doors while air condition units being used. Only use air conditioning Units when needed (wh normal ventilation and cooling is possible). Provide window shades or curtains to redu sunlight causing heat whitch would reduce need for air conditioners.

How can the Mannheim Garrison improve its recycling program? Place more recycle receptacles in locations where people use items that can be recycled. Clearly mark r bins. Increase awareness. Start at the lowest level with children. Even during the Fe have recycle teams working, such as a bag to pick up paper trash and a bag of alum and plastic and another for rubbish. All and all I think with more visible recycle bins will get a good start.

For more information about USAG Mannheim environmental programs visit our Sort Center, see us at #346 Taylor Bks; or look us up on the internet http://home.mannheim.army.mil/sites/directorates/DPW_web/Environmental.htm, or dial DSN 381- 8675 / commercial: 0621 – 730 8675.

Phone: 381 7101 Email: thomas.wamser@us.army.mil

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

Cut the light, if leaving the office for longer than 30 Minutes. Open door and windows for about 5-10 minutes and then close them, instead of opening just one, partially, but for long.

Report dropping faucets immediately to the building coordinator !!!

Switch off or report exterior lights, which are switched on during the day!!

How can the Mannheim Garrison improve its recycling program?

a) Offer a can of soda for every 50th (or e.g. 33rd, whatever you can afford) person, which brings at least one full yellow bag to the sort center.

b) Have receicling waste container(s) at the sport fields and recreation areas, even if sort center employees might need them later on.

For more information about USAG Mannheim environmental programs visit our Sort Center, see us at #346 Taylor Bks; or look us up on the internet http://home.mannheim.army.mil/sites/directorates/DPW_web/Environmental.htm, or dial DSN 381- 8675 / commercial: 0621 – 730 8675.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I save energy by using candles instead of keeping the lights on. It gives me light and freshens up the home also.

I save money on water by turning the knob completely off after I use it, so that no water is dripping constantly.

How can the Mannheim Garrison improve its recycling program?

By having color coded bags for everything.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

We save electricity by always turning lights, TV etc. off when nobody is left in the room. When away on trips unplug TVs etc. Keep the re-fridgerator on medium temp.

Heat we keep on the green zone on the dial on radiator. In winter only keep windows open for short time to air out. On sunny days keep Roulladuns down to keep sun out, winter to keep warm in.

Water: Do not run water constantly when brushing teeth or doing dishes. Leave a plastic bowl outside in garden to collect rain water for plants in garden.

How can the Mannheim Garrison improve its recycling program?

More training for people on what to recycle and where. My son is interested in helping with this as his Boy Scout "Eagle Scout" Project.

Show people how much the post can save by recycling.

Have the bottle containers emptied more often.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I save energy by turning off the water when I am brushing my teeth. Also, if I take a shower during the day, I leave the light off because I can see perfectly fine with the sunlight. Whatever water I do not drink I use to water my plants or put it to some other good use.

How can the Mannheim Garrison improve its recycling program?

Making recycling mandatory would probably help vastly. Instead of having refuse bins, make a compost [food, liquids, etc.] bin, a paper, plastic, and aluminum. Everything that this community throws away can be used. Buying more energy efficient light bulbs, trash bags, and other more energy efficient items for the Self Help on Taylor Barracks might cost a bit more at first, but the

money that we save for energy costs will help in the long run. Buying, or trading in our appliances for more energy efficient ones would also be a safe bet.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

How I save electricity, heat and water is pure and simple. To save heat, I don't use a heater which saves water because the heater uses boiling water to heat the heater up. This also saves electricity because it has to boil the water. Heat is generated by closing off any point of escape for heat, like a door or window. This creates a green house like effect. To get fresh air, I open the window every so often creating a breeze. To save electricity, I limit my activities that involve things that consume electricity, like using my computer or watching TV. To save water, instead of buying bottled water, we refill the bottles with tap water and let them chill in the fridge.

How can the Mannheim Garrison improve its recycling program?

We need to spread the awareness to all the people and create consequences that would affect not only their own personal environment, but everybody around them. This would force them to avoid the backlash from their neighbors.

Bill Beutel
DPW- Housing

"Sustaining the Environment for a Secure Future".

ENERGY CONSUMPTION – CONSERVATION: (What we do to conserve)

Water:

-Use the shower 98% of time, shower down, shut off water, soap (no phosphates), then shower down for final rinse.
-Collect rain water as much as possible to water the exterior plants
(at home in NC we collect the water from roof run-off into concrete cisterns to use to water the lawn areas and plants
-Stagger washing cycles and use smaller loads
In NC we recycle the grey water for re-use in wash cycle and new water for rinse cycle
-Use the toilets by flushing with smaller volume of water
-Insulate the hot water tank and the hot water lines; insulate cold water lines for moisture

Heat:

-Turn down the heat at night to 60-65 deg F
-Turn down heat during the day to 68 deg F
-Maintain 30- 45% humidity
-Wear sweaters and warmer clothing
-Install insulation boards over interior of windows at night
-Use other sources (in NC we heat with natural gas into a heat pump- will install Geothermal upon return to states
-Install building energy insulation to save on heating costs
-Install weather-stripping to reduce infiltration of cold air
-Windows and Doors in a typical home account for as much as four (4) time the energy loss as compared to the exterior walls.
-Keep windows facing south unblocked on sunny days for heat gain

Electricity:

-Use fluorescent bulbs where practical
-Use lower wattage for both fluorescents and incandescent bulbs
-Turn lights off when not being used
-Check appliances to see if they are "Energy Star" rated, especially refrigerators
-Turn off computer monitors
-Accomplish ironing at one time as opposed to sporadic use
-Use microwave more in conjunction with cooking by stoves- use a convection oven

MANNHEIM RECYCLING PROGRAM:

-Provide containers at each stairwell location for recycling. We are generally a lazy lot and convenience is a factor
-Institute a "deposit" system and process on the sales of bottles to ensure recycling occurs, this will allow people the ability to recycle and get money for doing so
-The cans and bottles could then be picked up enmass and delivered to the sort center by a smaller number of participants with a larger volume of items to recycle
-Provide a space where people can bring items that may be salvageable and then fixed and taken to the thrift shop for re-sale
-Set up "garage Sales" by area scheduled for different times of the year for residents of That area only for the months of March thru October and rotate out each year who has a particular month (e.g. Area A – Grant Circle-March, Area B- July, Area H- October, etc)

-Invest in an electronic message board for messages and information that could be located mid-way down Washington Street that would have reminders of environmental recycling, safety, and events.

Energy:

-Reduce exterior light fixture bulbs by 50% reduce to 1.0- 1.5 ft candles per sq foot In parking areas and streets

-Minimize exterior building lighting

-

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I'm not going to lie and say that I do everything possible to save our precious natural resources, but I know that every little thing I do end up doing, whether it be turning off the lights, or recycling things rather than just throwing them in the garbage, helps the environment in many ways. Our post could conserve energy, as well as save a lot of money, by just recycling.

When you throw something in the trash, it has to be disposed of. The army has to pay someone to come and pick up the trash. This trash is then taken to an incinerator or landfill of some sort, which the army also has to pay for. All of this trash is then left to decompose. Just think if everyone was to take the extra few seconds to sort out their trash and recycle. All of this "trash" would be turned into something that could be used over, and over again.

To conserve water, people could do all sort of things. For example taking less time in the shower, and making sure all of the faucets are off before you go to bed. People could also try turning off the water when brushing their teeth rather than leaving it on the whole time. It may seem like a little bit of water if the faucet is on for one minute, but when you do this every time you brush your teeth, and if everyone else on post did this every time they brushed their teeth, it adds up to a lot. Small things like these can help the post save water as well as money.

Electricity and heat are easy things to conserve, but few people actually do. Just make sure all your electronic devices are off when you go to bed. I mean, why do you need your television, or lights on when you are asleep? Also, don't have the heat on, and the windows open. Having the windows open lets out heat. Once the heat is out, your house uses more power to heat the house again.

Something needs to be done about our use of energy. We waste so much. All those resources wasted by cost the government money, and kills our environment.

How can the Mannheim Garrison improve its recycling program?

I Believe the Mannheim Garrison needs to put more awareness out for the benefits of recycling. If people know that recycling not only helps the environment, but also helps save the government money they might think twice about throwing their "garbage" in the trash can, rather than the recycling bin. I'm not sure how to boost this awareness though. Putting up posters probably wouldn't help that much. The people need to be involved in this. Maybe making more contests like this one would get more people involved.

There also should be more recycling bins put out around base. The more bins there are, the more people might feel apt to throwing their plastic bottle in the recycling bin, than the garbage can. The main thing that needs to be done is to inform the people about the benefits if recycling.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

It is important to maintain a healthy environment and community in order to have a successful and prosperous population. The ways in which I personally help develop a positive and healthy atmosphere includes: not leaving the water running when I brush my teeth, not taking unnecessarily long showers, recycling disposables, turning off lights when I leave the room or that I notice were left on by others, and using heaters only when totally necessary and you don't have any more blankets.

How can the Mannheim Garrison improve its recycling program?

Considering, we in Germany are already greatly lacking in air condition equipment, we are already conserving a lot of energy that people in the States use all the time during the hot summers. But, there is always room for improvement. So, as a way of increasing/improving our recycling program here in Mannheim, all facilities (including our school) should have separate trashcans for paper, plastic, and refuse. There are still some places where these are non-existent. Another thing our Mannheim Garrison could do is organize programs and activities that get people involved. Such things as contests and community drives will encourage people to participate and give them initiative. It is also important to educate members of the community.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

Turning off the television, computer, and faucet in the bathroom, I help conserve water and energy in my household. Along with hanging my clothes up to dry, and washing the dishes by hand, I encourage all of my three sisters to do the same. Around the community, we all probably notice the pieces of trash lying on the ground; most of it recycle products that can be reused. Implementing recycle bins around post and by the housing areas, we can promote recycling to our young adults and children.

How can the Mannheim Garrison improve its recycling program?

Placing different recycle containers: plastic, glass and paper, around the community and housing areas, the Mannheim Garrison could improve its recycling program. Establishing the want to recycle, our community could reduce the amount of energy and trash we consume. Recycling will also decrease the items around the street, which could be reused for other products, such as paper notebooks for school or desks for the classroom.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

Energy conservation and the reduction of natural resources is important.

Electricity

Its as simple as

- Turning lights off when they aren't being used.
- Opening windows to illuminate rooms instead of using lamps.
- Candles produce light, smell good, and give off a romantic ambience. What more could you want?
- Using low watt bulbs, and low watt appliances
- Fill up the dishwasher or washing machine completely before you start a load.
- Is a dryer necessary?? On these hot summer days why not hang some clothes outside?

Heat

Abc, 123, heat, heat, heat

- Keep your windows closed on those cold winter days.
- Insure that your heat is not escaping through those windows by sealing around the edge of the window.
- One word: insulation
- Put a timer on your hot water heater. Time it around hours that there wont normally be any hot water used.

water

- Make sure all water pipes are tightened so as not to lose any water BEFORE it gets to you.
- Shorten your shower time. (I know, we all hate to do this)
- Again: make sure your dishwasher/ washing machines are full before you start them.
- Water your lawn every now again. Remember you may make your lawn prettier but you killing fish as well. Might as well let the water be greener on the otherside.

Everyone can help reduce the amount of resources we use; the young AND the young at heart. Size and gender play no factor in this resolution; we are all part of this community and together we can make a difference. Joint effort is critical.

How can the Mannheim Garrison improve its recycling program?

Start one.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I save electricity by unplugging things when I am done using them. I also save electricity when needed; I don't use things like watching TV for extended amount of time. Also if it is nice outside and I don't need to use lights in the house then I wont use them, I will also turn off the heat if it's nice out. There are many little things that people don't think about that can help out in saving electricity, like unplugging things when you're done using them. This way you will save electricity.

Back to the whole electricity thing, saving heat is also important. If it is nice outside I don't need to have to heat on. When I'm not home I turn off the heaters in order to save heat.

I save water by washing my dishes in the sink; I fill the sink on both sides on with soapy water and the other with just water. This way I save water from using the dishwasher. I also save water by using the water jug instead of drinking the water from the tap. A good way in order to save water is to only shower once every other day, and try not to wash your dishes or clothes everyday. It would be better to try in pick a day in order to clean your dishes and clothes, that way you save water.

How can the Mannheim Garrison improve its recycling program?

Mannheim Garrison can improve its recycling program by have recycling in school and other places that people tend to go. Well now that we have a skate park we should probably put some recycling there too, because if not there will probably be a lot of trash. Even though there are trash cans already there we could put recycling bens there to help improve the recycling program. Things like this will help the recycling program greatly, even though there little changes, it will make a big difference.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

Saving water, heat and electricity could lead to saving our world. Each person can participate in saving these things by conserving what we use in our daily lives. In a day, a person can use an excessive amount of water or electricity, and even heat. This use causes many different issues; global warming among them.

Personally, I do few things to conserve these products of the world. While at home, I turn off the lights if I know I'm not going to be in the room any time soon, and if I see a light left on, I will turn it off. My younger brother has a habit of leaving on lights, water, and other things. If I notice this, I turn it off, along with informing him that he should shut it off next time. Explaining the reasons why helps him to understand that it could help the environment around him, and in the long run, the world.

Besides electricity, I also attempt to save water. While brushing my teeth, I turn the water off when I'm not using it, and this saves water. While showering, I try to limit the amount of time I spend in there. I do not use an excessive amount of water outside the bathroom, while in the kitchen I also follow these rules. If I'm not using it, it's shut off. And while I AM using it, I only use it for as long as needed.

Just these simple things help to save our world. If everyone participated in these things, it would help our environment and our world as a whole. So do yourself a favor, along with others, and turn it off if not in use!

How can the Mannheim Garrison improve its recycling program?

Earth and Energy Week 2007

United States Army Garrison Mannheim

We ask for your support to improve the Mannheim Garrison energy saving and recycling program. Please fill out the questionnaire by giving us your experiences and suggestions for energy saving, water and heat conservation, and recycling. Winner will be selected randomly.

Please send this page back to the DPW Environmental Management Division by Fax: DSN 381 – 8289 / commercial: 0621 – 730 8289; bring it to the Sort Center, Taylor Bks #405B; contact us by email: dt293dbsbdpwemd@cmailmail.26asg.army.mil, or visit us at Taylor Bks #346 room 306. **Closing date for the raffle is Monday, April 16, 2007, 16:00 hrs.**

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

These are easy and simple methods of conserving all of the above cheaply.

We can conserve water in many little ways such as turning water of during brushing teeth or washing dishes, showers that are not as long.

Heat can be saved easily within a family by turning them on while they are home and leaving the heaters off when one is out, and by using less heat and more warm clothing when indoors.

Electricity can easily be conserved by turning of the lights when not in use and to use natural sunlight during the day. Have fewer televisions and such electrical components running at a time. Turn of electrical devices. By spending more time outside and doing activities outside which, contribute to conserving all of the above.

How can the Mannheim Garrison improve its recycling program?

The recycling program can be improved by encouraging the inhabitants to recycle all recyclable trash, conserve water electricity and heat by using less. More enforcement should be made to prevent littering of trash which could be recycled. And have more established organizations within the community to help recycle the trash of the people and passing on knowledge of conserving energy.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I "try" my hardest not to take LONG showers. I turn off the water when I am brushing my teeth. When it comes to electricity, I turn off the light when I don't need them. Like in the evening when I take a shower and the sun is still up. I turn off the light. There is plenty of light outside, why waste energy. I don't really use the heater unless it is extremely cold. (Which I don't get very easily) My suggestion would be, use blankets when it gets cold. They can be very comfortable, and we all love comfort.

How can the Mannheim Garrison improve its recycling program?

I think that people should actually sort their trash. My family has 3 separate containers; 1 for trash, 1 for paper, and 1 for plastics/recycling. If everybody did that, then it would help tremendously. Now you might be thinking that 3 containers take up a lot of room. What you could do is get the plastic boxes that can stack on top of each other. Now what you do is find a cabinet where you can stack the boxes in. Close the door and they are out of the way. What you could also do is get involved in some organizations that are working to protect the environment and promote recycling. (example: Girl Scouts)

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

There are several small things that each member of the family could do that will affect the amount of energy that our community uses. For example, my family and I try to make a habit of always turning off the lights when we leave the room. We also try to use the sunshine instead of artificial light when possible. We make sure that we don't leave the water running while we are washing dishes or brushing our teeth. Can you imagine all the water that is wasted when you leave the faucet running while you are brushing your teeth? It is also easy to forget to unplug appliances when you leave for school or work each morning. While the appliance may not be in use, there is still electricity going to waste! By merely taking a few seconds of your day to unplug the toaster or turn off the faucet while you are washing your dinner dishes, you could decrease the amount of energy the Mannheim Community uses greatly!

How can the Mannheim Garrison improve its recycling program?

While recycling may seem like a pain, it really does improve the environment! Not only does it improve the appearance of your community, it uses less of the resources that will, someday, fade away.

Many people don't recycle simply because there is no place to recycle. Sure, we have bins in our neighborhoods, and at the Food Court, but there is nowhere to recycle at the schools. There are so many soda cans thrown away everyday that could have easily been recycled. It would also be very easy to recycle papers that are no longer needed, but since there is nowhere to recycle them at school, they get thrown away.

If everybody would simply throw the empty milk carton into the yellow bags, or put the cereal box into the blue bins outside, the community would be greatly affected.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

To save electricity, I make sure that all the lights that are not in use are turned off. Also, I leave all the electronics turned off as well if I am not using them. To save heat, I leave all the windows and the doors closed most of the time, except when I try to change the air of the room. To save water, I make sure that all the water is off when no one's using it.

How can the Mannheim Garrison improve its recycling program?

As far as I know, everyone in Mannheim is supposed to separate their trash. Therefore, the only thing the community has to do would be encouraging recycling, and making sure that everyone is involved in it. To help that, the community could make some posters and post them next to the trashcans to remind people that they are supposed to separate the trash. Also, they could use AFN commercials that could show some benefits of recycling.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

When living off-post, trying to save water is very important because we have to pay for it. I lived on post for a year and we used a lot more water than we do now. So to save water we make sure not to keep the water running on, for example when you're brushing your teeth or washing the dishes. To save heat we make sure the heaters stay at a constant temperature. Every time I turn on the light and leave the room I make sure the light switch is off to conserve electricity.

How can the Mannheim Garrison improve its recycling program?
-The Mannheim Garrison community can improve their recycling by separating waste and trash with plastics, paper, and bio. They already have the bins here but most Americans fail to use this wise recycling system. So encouraging them to use the three trash bins can go a long way to improve recycling here in the community. In the Mannheim High School there is no recycling, so the school is setting a bad example to students who fail to recycle at home. Therefore, the school itself should consider recycling to show students that recycling can improve the community and benefit from all the recycling done here in Mannheim.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

To save electricity in our home we leave all lights and appliances off unless we are other in the room or need the lights to be on. To conserve water we don't use a lot because we live off base and have a German house so we have to pay so we use as much as possible. We use the water to wash dishes, bathroom, drinking, and taking showers. We normally don't have the heat on because our house is normally hot and humid so we just open windows so we don't use that much gas or heat.

How can the Mannheim Garrison improve its recycling program?

I think there should be one bin for recycling for all the recyclables and for trash because the bins over flow and the people don't come that often so they would have reason for coming.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I save heat by not turning on the heaters in my room when it is cold; I just put more clothes on and maybe even a sweatshirt in my room. I also save heat by huddling close to my friends when we are together in a house and just keep the heaters off. I save electricity by not being in my house to use it and when I am in my house I use natural light to do just about everything. When I leave a room I always turn off the lights no matter how long I'm going to be gone.

How can the Mannheim Garrison improve its recycling program?

You should use the "Homes for Everyone" idea and put a limit on the kilowatt hours used per month so that everyone uses the same amount of energy. You should use a limit of about 500-700 kilowatt hours per month so that there is enough for the people to get used to it and then you may be able to lower it even more. This could save and recycle energy. You could even use solar panels to provide heat for a house. This could reduce cost and energy for a lot of people and give more money to the government.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I save energy by turning off the water when I am brushing my teeth. Also, if I take a shower during the day, I leave the light off because I can see perfectly fine with the sunlight. Whatever water I do not drink I use to water my plants or put it to some other good use.

How can the Mannheim Garrison improve its recycling program?

Making recycling mandatory would probably help vastly. Instead of having refuse bins, make a compost [food, liquids, etc.] bin, a paper, plastic, and aluminum. Everything that this community throws away can be used. Buying more energy efficient light bulbs, trash bags, and other more energy efficient items for the Self Help on Taylor Barracks might cost a bit more at first, but the money that we save for energy costs will help in the long run. Buying, or trading in our appliances for more energy efficient ones would also be a safe bet.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

How I save electricity, heat and water is pure and simple. To save heat, I don't use a heater which saves water because the heater uses boiling water to heat the heater up. This also saves electricity because it has to boil the water. Heat is generated by closing off any point of escape for heat, like a door or window. This creates a green house like effect. To get fresh air, I open the window every so often creating a breeze. To save electricity, I limit my activities that involve things that consume electricity, like using my computer or watching TV. To save water, instead of buying bottled water, we refill the bottles with tap water and let them chill in the fridge.

How can the Mannheim Garrison improve its recycling program?

We need to spread the awareness to all the people and create consequences that would affect not only their own personal environment, but everybody around them. This would force them to avoid the backlash from their neighbors.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences. The way that I conserve energy is I don't watch that much TV I just go outside and hang with my friends. I didn't play video games because I think there really boring. I only go on the computer for school work or if I really what to look something up. Y family also makes sure that if we don't need the lights then we leave them off and sometimes on rare moments we light candles in the living room and kitchen. And conserving heat is very easy because I can't stand to be hot so I never have the heater on and if I do get cold I open or close my windows. Water I can't say I conserve it because I brink a lot of it, but as far not wasting it I think I do a good job at it. If I am not getting something to drink or showering I don't think it is ever running. When taking a shower I am in and out in like 10 minutes.

How can the Mannheim Garrison improve its recycling program?
Improving the recycling program would be a hard task to it done because you can't make people recycle, so what I would suggest for you to get some people that are really in to the whole recycling thing and ask them to go and pick up trash that can be recycled, and have them go to the bumps and look for things that can and should be recycled but people just throw away.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I save water by turning the "Eco" setting on which save about half of all the water used during a shower. I save heat all year round by not even turning on my radiator but instead I use a huge blanket during winter. I save electricity everyday since my parents installed motion sensor lights in our basement which stay on for 5 minutes and then shut off, this stops the chance of leaving a light on in the basement.

How can the Mannheim Garrison improve its recycling program?

I suggest putting recycle bins in all of the apartment houses. This will make people think twice before throwing away that empty can.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.
I try to save energy by turning off unused lights and turning the water faucet off when not being used. I try to use minimal heating during winter. Three to five minute showers are enough for me too. Turn something on only if you are going to use it and encourage family members, as well as friends to do the same.

How can the Mannheim Garrison improve its recycling program?
Create better, easier to use, recycling bins. A "Yellow Bag" bin doesn't cut it. Put PLASTIC, GLASS, CARDBOARD, PAPER, and WASTE in big, easy to read letters in all the housing and recreation areas. Maybe AFFES can try to sell more recycled goods too.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.
Saving electricity includes turning off lights when they aren't needed, unplugging unused electronics (from charges or anything of the type), and keeping all unused electronics (such as the TV, computer, stereo) off.

How can the Mannheim Garrison improve its recycling program?
By placing more recycling bins all around post, not just trash cans or dog poop posts. It will be easier for people to recycle if they have more chances to.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

My family doesn't watch TV that much and I always turn off the lights. We don't take long showers. I turn off the faucet when I brush my teeth.

How can the Mannheim Garrison improve its recycling program?

Make a limit on the amount of energy and water used at one time like a project that I heard about called "Homes for Everyone." I heard this from my friend named Matt Benoit and he gave me the idea during my chemistry class on Monday April 17, 2007.

This project builds homes that have a limit on the amount of energy and water that can be used in a month. You could make the limit something like 500 Kwhrs/month so that we have enough energy to get through the month. I have seen that the meter in my house is on a number like 1275 kwhrs/month which is an overload of energy.

How do YOU save electricity, heat, and water? Let us know YOUR suggestions, ideas, and experiences.

I do feel that it is of great importance to conserve energy and use resources wisely in order benefit the community. The ways I do this include never letting the water run. When brushing your teeth you waste water when you can simply turn it on. Also by being stationed in Germany where air conditioning is not considered a priority, I realize that we can use methods such as turning of lights, opening windows and using blinds to conserve electricity. This reminds me that you can save electricity by turning off lights, televisions, and radios when not in a room. With just these few suggestions any one can conserve and help their own environment.

How can the Mannheim Garrison improve its recycling program?

I believe that everyone should be forced to recycle. Everyone needs to understand that it is not punishment and that it is a way to improve our atmosphere.
